

Energy Powerflex

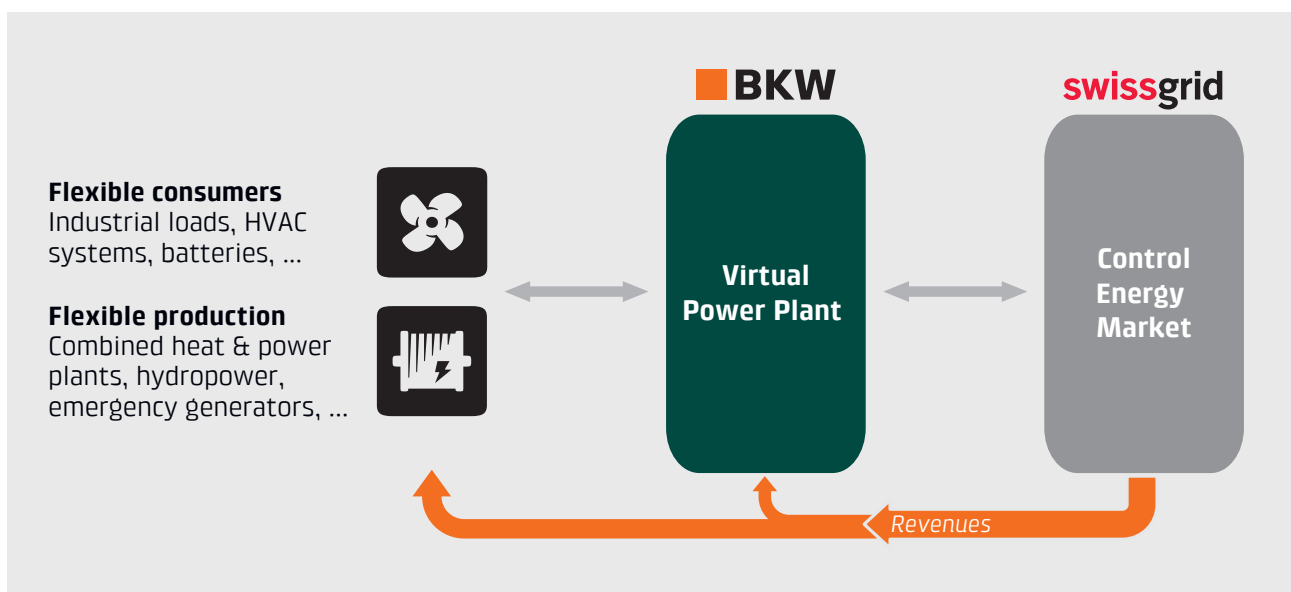

Discover Powerflex: the control energy pool for grid stability

Secure regular revenues and play an active role in the energy transition. Join Powerflex – the BKW control energy pool.

The Swiss transmission system operator Swissgrid operates the control energy market, a platform designed to ensure grid stability. Here, controllable assets are made available for a fee in order to be ramped up or down in an emergency. However, most companies do not have the necessary

capacity with their assets to participate independently in the control energy market. Powerflex makes this possible by pooling small-scale assets and assets with variable availability, giving you the opportunity to profit from the attractive prices of the control energy market. If your assets meet

the requirements of Powerflex, they are added to the control energy pool via a secure connection, such as the Powerflex box.

The revenues consist on the one hand of the revenues from the **capacity provision**, i.e. plant availability, and on the other hand of the remuneration for **the energy dispatched**. Based on the availability of your assets, the revenue share is determined between you and BKW.

The following asset types with an available capacity of at least **200 kW per asset or asset pool** are ideal for Powerflex:

- Combined heat and power plant
- Small hydropower plant
- Emergency power generators
- Batteries
- Industrial consumers (compressors, mills etc.)
- HVAC systems

Contact our team today for more information and to prepare your assets for Powerflex. Powerflex is available throughout Switzerland and is independent of your electricity supplier.

Your benefits

- Regular revenues for asset availability and energy dispatch
- We handle trading activities, dispatching and billing for you
- You retain full control over your operational processes
- No penalties for short-term asset unavailability
- 24/7 control centres
